**DETAILED ACTION**

1. Applicant's election of the species of figure 8, claims 5 - 8, without traverse is acknowledged. Claims 1 - 4 and 9 - 19 are withdrawn from consideration on the merits.
2. This application is in condition for allowance except for the presence of claim 1-4 and 9-19 directed to the species of Fig. 7 as non-elected without traverse. Accordingly, claims 1-4 and 9-19 have been cancelled.
3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claims 1-4 and 9-19 are cancelled by the examiner.

4. The drawings filed on 09/29/2003 are acceptable.

***Allowable Subject Matter***

5. Claims 5-8 are allowed.

The prior art of record does not suggest or disclose a method for broadening a dynamic range of a solid-state image

sensor including photosensitive cells each being made up of a main region and a sub-region respectively provided with higher and lower photosensitivity, and allowing signal charges to be read out from the main region and the subregion separately, comprising the steps of digitizing the signal charge read out from the main region and writing a resulting digital signal to two memories; amplifying digital signals written to the two memories with different gains; and combining two kinds of digital signals amplified; whereby the dynamic range of the solid-state image sensor is broadened by use only of the main region.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

**Harada Koichi (Translated copy of JP 09-205589)** discloses an image pickup device in which the dynamic range is expanded without generating fixed pattern noise resulting from unevenness of saturated charge amounts Qs of each picture element.

**Matsumoto (US 6,677,992 B1)** discloses an imaging apparatus offering a dynamic range that is expandable by weighting a plurality of image signals, which are produced different

exposure times, or the like, with a plurality of coefficients whose sum is 1, and adding them up.

**Kamishima (US 6,219,097 B1)** discloses an image processing apparatus, and more particularly to an image processing apparatus capable of outputting an image having a wide dynamic range by using a solid-state image device to synthesize and compress images of two or more screens having different quantities of exposure.

**Yamashita et al. (US 7,190,403 B2)** discloses a solid-state image pickup apparatus of included a solid-state sensor in which a plurality of photo sensor cells are arranged in a bi-dimensional array for converting light incident from a desired scene to corresponding signal charges.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance".
